## Algebra 1B Unit 2 Practice Test

**1. Please answer each question in at least TWO COMPLETE SENTENCES using at least TWO ALGEBRAIC TERMS. Echo the prompt and avoid vague words.**

a) What is a system of linear equations? When finding the solution of a system of linear equations, what are you searching for?

---

---

---

---

---

---

b) What are the three possible solutions to a system of linear equations? Be sure to mention the solutions and the circumstances by which they occur.

---

---

---

---

---

---

c) Write a system of linear equations. Tell which method you would use to solve this system and why.

---

---

---

---

---

---

**2. Solve each system of equations by graphing.**

**You MUST check your solutions via SUBSTITUTION.**

a)  $y = \frac{1}{4}x - 2$  and  $y = \frac{1}{4}x + 5$

**Answer: (\_\_\_\_, \_\_\_\_)**

b)  $y = \frac{-3}{4}x + 1$ ;  $y = 6x + 1$

**Answer: (\_\_\_\_, \_\_\_\_)**

5. Ms. Chall wants a magician for the dance. She found two magicians in the area. Abraca charges a fifty dollar flat fee plus fifteen dollars per hour. Daba charges a five dollar fee and thirty dollars per hour. After how many hours will the costs of the magicians be the same? What will that cost be?

a. Define variables that make sense for the situation.

b. Write a system of equations.

c. Solve the system using a method of your choice.

d. Check via substitution and reality.

e. Write your answers with labels.

6. A certain amusement park has an entrance fee and an additional fee for each game you choose to play. Maniya paid for herself and four of her friends to enter the park and paid for eighteen games, for a total of \$88.50. Tonaë paid for herself and two of her friends to enter the park and paid for twenty-two games, for a total of \$75.50. What is the cost of one entrance fee? one game?

a. Define variables that make sense for the situation.

b. Write a system of equations.

c. Solve the system using a method of your choice.

d. Check via substitution and reality.

e. Write your answers with labels.

7. WLPCS received a grant to take a trip to California! They have a budget to take seven total modes of transportation, some planes and some buses. Each plane can hold one hundred forty passengers and each bus can hold sixty-four passengers. If there are a total of seven hundred fifty-two passengers, how many planes will WLPCS charter? How many buses?

a. Define variables that make sense for the situation.

b. Write a system of equations.

c. Solve the system using a method of your choice.

d. Check via substitution and reality.

e. Write your answers with labels.

**Multiple Choice: Write the CAPITAL LETTER of the correct answer.**

8. \_\_\_\_\_ Which of the following systems does NOT have the solution (0, 3)?

- A.  $y = 3; x = 0$                       B.  $y = -2x + 3; y = 5x + 3$   
C.  $y = 2x + 3; y = 4x - 3$               D.  $y = -2/3x + 3; y = 7x + 3$
- 

9. \_\_\_\_\_ Which of the following systems has NO solution?

- A.  $y = 3; x = 0$                       B.  $y = -2x + 3; y = 2x - 7$   
C.  $y = 1/2x; y = -1/2x + 6$               D.  $y = 1/2x - 9; y = 1/2x + 12$
- 

10. \_\_\_\_\_ What is the first step to solving the system below by *elimination*?

$$4x - 2y = 13$$

$$5x - 2y = -9$$

- A. add the two equations                      B. multiply the second equation by negative one  
C. multiply the second equation by negative two              D. isolate y in the first equation
- 

11. \_\_\_\_\_ What is the first step to solving the system below by *substitution*?

$$y + 2x = -3$$

$$3x + 2y = 9$$

- A. add the two equations                      B. multiply the second equation by negative one  
C. multiply the second equation by negative two              D. isolate y in the first equation
- 

12. \_\_\_\_\_ Which of the following IS a system of linear equations?

- A.  $y = 2; x = 5$                       B.  $y = x^2 - 3; y = x + 5$   
C.  $y = 4x - 1$                       D.  $y = -5/3x + 1; y = x^3 - 2$
- 

**Open-Ended: Create an example for each situation described.**

13. Write a system of equations that can be solved via elimination WITHOUT requiring multiplication as the first step.	14. Write a system of linear equations with three equations.
15. Write an equation that requires the use of the distributive property.	16. Write an equation that requires you to combine like terms.
